Subject: ASCC OCR Case No. 10142001 – Ramp Action Plan

Talofa OCR Attorneys Brittany and Emily,

Provided for your review is the American Samoa Community College's (ASCC) Action Plan with Reference to Case Number 10142001 – Outstanding compliance measures/resolution agreement regarding the College's Ramp with respect to two remaining items to be addressed that include:

- 1. Edge Protection on all railings; and,
- 2. Second Level Run/Slope (too steep).

Actions Taken and Plans:

The College in consultation with a certified architect collaborated on correcting the steepness of the College's Ramp level-two run at which a new set of new blueprints were attained for the scope of work to be completed. Blueprint drawings Sheet(s) A1 - A3 provide a visible expectation of the ramp to include corrective measurements to the railings (edge protection), while Sheet(s) S1 - S5 provide a summary of measurements and expectations for the entire ramp and to address the steepness of run-two. Please refer to Appendix A.

The College has also attained consultation from an engineer on the estimated cost(s) of the corrections to be made to the ramp and the duration for the ramp to be completed. Ramp corrections include the extension of Run(s) one and two with a slight modification to landing-one. This also will include the costs for the welding of pipes to address the edge protection for all railings requirement as noted above. The estimated costs is thirty

to fifty thousand dollars and the requested duration for the College to complete the renovation/corrections of its ramp is four-months (May – August 2023).

The College shall appreciate any feedback regarding its Action Plan and look forward to hearing from you.

Sincerely
